*R/S*

Sir:

Please amend the above-identified International (PCT) Application, which is filed herewith, as follows:

In order to reduce the filing fee, and also improve the form of the claims and thereby expedite the prosecution, please cancel Claims 1 - 45 and substitute new Claims 46 - 51 as follows:

46. Apparatus for injecting a substance into a surface which apparatus comprises a needle, a container for the substance to be injected, a means for applying the substance from the container to the tip of the needle, a means for driving the needle to penetrate the surface and deliver the substance thereto which means comprises a block slidably mounted in a conduit which block is accelerated by a controlled force to strike the needle assembly thereby inducing an acceleration of the needle to drive it into the surface.

47. An apparatus as claimed in Claim 46 in which, in use, the majority of the energy for penetration after contact with the surface comes from the momentum of the needle and associated moving parts and not from the continued force of the driving means.

48. Apparatus as claimed in Claim 46 in which the driving means is pneumatically operated.

49. An apparatus as claimed in Claim 46 in which there is a stopping means incorporated in the driving means adapted to bring the needle to a rapid stop.

50. Apparatus as claimed in Claim 49 in which the driving means comprises a block slidably mounted in a conduit so that

ga  
application of a pneumatic force or spring at one end of the conduit will propel the block at speed down the conduit, so that it will strike an end piece which forms part of, or is connected to the end of the needle.

51. Apparatus as claimed in Claim 50 in which there are means to generate a pulse of gas in the conduit which propels the block down the conduit.

Respectfully submitted,
